WORKSHOP HANDOUT

Building UI With AI: Resources

Companion to the hands-on workshop **"Building UI With AI Without Creating Slop"**. Every entry is a link. Entries marked SHIPPER CLUB come from the Shipper Club resource list.

1 · Inspiration | 2 · Execution | 3 · Prebuilt pieces

01 Inspiration sources

PILLAR 1

Don't prompt "build me something". Find a reference, screenshot it, and say "I want something like this".

Mobbin SHIPPER CLUB

mobbin.com

Searchable library of real mobile and web app screenshots and flows. Use it to find a hero, features or pricing section to screenshot as your reference.

Refero Styles

styles.refero.design

Real website styles with AI-readable DESIGN.md files (colors, type, spacing). Attach a style's DESIGN.md plus a screenshot to your brief.

Refero

refero.design

Large, searchable collection of web and iOS UI references. Use it to look up how real products handle a specific pattern.

SaaS Landing Page

saaslandingpage.com

Landing page examples from SaaS companies. Good hunting ground for dev-tool heroes, feature grids and pricing sections.

Lapa Ninja

lapa.ninja

Gallery of thousands of landing page designs with screenshots and videos. Use it to compare section layouts.

Land-book

land-book.com

Hand-picked website design gallery, updated daily. Use it for overall page direction and type pairing.

Landingfolio

landingfolio.com

Landing page designs, templates and components. Use it to compare individual sections side by side.

One Page Love

onepagelove.com

Gallery of single-page websites and templates. Useful when your page is one scroll: hero, features, install.

Figma Community SHIPPER CLUB

figma.com/community

Community-made templates, UI kits and design systems. Mine it for patterns and layouts.

The Component Gallery

component.gallery

Interface components collected from real design systems. Use it to see how one component is done well across systems.

Design Systems Surf

designsystems.surf

Browse real design systems and their components. Use it to pick a coherent visual language, not just one screen.

Vibrant Design

vibrant.design

Curated website, section, launch-video and UI design inspiration. Browse by section type (hero, features, pricing, CTA) to find a reference for each part of your page.

02 UI libraries, blocks & component systems

PILLAR 3

> **shadcn/ui is not a library.** It is a system for UI components and for building your own UI library: the code lives in your project. What you hand the AI are the **blocks** and complete pages built on it, plus prebuilt libraries like React Bits.

shadcn/ui SHIPPER CLUB

ui.shadcn.com

The foundation: open-code components you copy into your project and own. A system for building your own UI library.

shadcn/ui blocks

ui.shadcn.com/blocks

Official open-source blocks to copy and paste into your app. Hand these to the AI instead of asking it to invent sections.

shadcn registry directory

ui.shadcn.com/docs/directory

Index of community registries for shadcn/ui components and blocks. Start here to find more blocks.

Shadcnblocks

shadcnblocks.com

Hundreds of extra blocks and components built with shadcn/ui, React and Tailwind. Described as premium on its site.

Tailark

tailark.com

shadcn/ui registry of marketing blocks, pages and illustrations. A direct fit for a landing page build.

React Bits

reactbits.dev

Free, open-source animated React components: text effects, backgrounds, cards, micro interactions. Copy the source.

Magic UI SHIPPER CLUB

magicui.design

Animated UI components and templates aimed at landing pages.

Aceternity UI SHIPPER CLUB

ui.aceternity.com

React and Tailwind components, blocks and landing page templates built with Motion.

UI Layouts

ui-layouts.com

Open-source React, Next.js and Tailwind components, free to use per its site.

21st.dev

21st.dev

Large catalog of React and Tailwind components, templates and shadcn themes, installable with one command.

tweakcn

tweakcn.com

Visual theme editor for shadcn/ui. Set colors, radius and type once, then give the AI your tokens.

Motion SHIPPER CLUB

motion.dev

Animation library for React and JavaScript (formerly Framer Motion). Use for purposeful motion only.

Lucide SHIPPER CLUB

lucide.dev

Consistent, community-made open-source icon set.

v0 SHIPPER CLUB

v0.app

Vercel's AI app builder. One option for the Pillar 2 comparison: run the same brief here and in your usual tool.

03 Anti-slop references

REVIEW LOOP

Read one before your critique pass, then check your page against it.

The Slop Taxonomy (AHD)

github.com/Ad-Astra-Computing/ahd/blob/main/docs/SLOP_TAXONOMY.md

Named catalog of 39 tells of AI-generated design across web, graphic design and typography. Use it as a negative checklist.

AI Design Slop: 16 Patterns

developersdigest.tech/blog/ai-design-slop-and-how-to-spot-it

Developers Digest write-up of 16 landing-page patterns (fonts, colors, layout, CSS) that read as AI-made.

avoid-ai-design

github.com/funboy322/avoid-ai-design

GitHub project that audits AI-generated frontend and rewrites it to stop looking AI-made. Includes a scanner.

aislop

scanaislop.com

Open-source CLI that finds AI slop in code (dead code, swallowed exceptions, narrative comments). Code, not visuals.

Unslop (Cursor)

github.com/cursor/plugins/blob/main/pstack/skills/unslop/SKILL.md

Cursor's skill for cutting AI tells from writing: filler, AI vocabulary, em dashes, vague claims, passive voice. Use it on your UI copy: headlines, feature text, button labels.

04 The workflow in one box

1. **Inspiration.** Screenshot + context: what the product is, who uses it, what this screen is for. "I want something like this."
2. **Prebuilt pieces.** Pick a hero, a features grid and a pricing or install block. Integrate them as-is; change only copy, the code snippet, the install command and tokens.
3. **Execution.** Run the same brief and blocks in 2+ tools or models. Build in passes (shell, components, states, polish) and compare side by side.
4. **Critique.** Screenshot the result: "Review this like a senior product designer. Return concrete changes only."

Anti-slop checklist

- ☐ Is the code snippet real? Does it actually run for this tool, and does the copy button copy it?
- ☐ Is the install command exactly right (package name, package manager, flags)?
- ☐ Does the hero say what the tool does and who it is for, above the fold?
- ☐ Is the feature copy vague ("blazing fast, powerful, seamless") instead of saying what each feature does?
- ☐ Are there invented stats, testimonials, "trusted by" logos or GitHub numbers?
- ☐ Did the AI rebuild something the chosen block already provides?
